JANNET AKANKSHA EKKA

Forward Deployed Engineer · AI Agents · Client Delivery · Production Systems

jannetekka96@gmail.com | +91 90788 02572 | linkedin.com/in/jannet-akanksha-ekka | github.com/JannetEkka | jannetekka.github.io/DSProjects | Kolkata, India · remote or relocation

PROFESSIONAL SUMMARY

I put AI systems into other people's environments and keep them working there. For four years at Deloitte I was the engineer on the calls with Fortune 500 client teams (AT&T, Hewlett Packard Enterprise), running demos and requirement sessions in US, UK and India hours and leading a 6-person QA team. Since 2024 I have built and run a live AI trading agent on my own; when its cloud billing closed, I moved it to a new stack in two days and it picked its open positions back up from committed state. In October 2026 I submitted four working products in seven days, each on a different sponsor's platform, each with a public repo, a working build and a demo video. Rank 1 in the UT Austin McCombs AI/ML postgrad.

TECHNICAL SKILLS

Client Delivery	Demos, working sessions and requirement calls with client teams across US, UK and India hours; scoping a build to a fixed deadline; defect triage with client engineers; weekend on-call; writing for the people who will use the system: READMEs, technical reports, demo videos, blog posts
AI & Agents	Gemini (Vertex AI and AI Studio), Google ADK, Model Context Protocol (servers written from scratch), A2A SDK, tool calling, structured output, prompt engineering, RAG with measured retrieval, graph-backed agents on FalkorDB (Cypher), local LLMs on llama.cpp (Apertus 1.5 8B), multi-agent orchestration
Integrations	GitHub API and GitHub sign-in, Gmail and Calendar through MCP, BigQuery and Google Maps MCP servers, Alchemy webhooks, Solana Mobile Wallet Adapter, EVM contracts with an Envio indexer, AWS Textract and Comprehend, REST and WebSocket APIs
Deployment	GCP: Cloud Run, Compute Engine, Cloud Functions, Vertex AI, BigQuery, AlloyDB & pgvector, Firestore, Secret Manager; AWS: S3, EC2, RDS, SageMaker; Oracle Cloud, Cloudflare Workers, Render; Docker (including offline internal networks), systemd, GitHub Actions
Engineering	**Python and SQL are the languages I take into a coding interview.** TypeScript and JavaScript I have shipped and read fluently, and I would be ramping in them rather than leading. Kotlin and Jetpack Compose for one shipped Android app. FastAPI, Flask, Streamlit, Django, React, Next.js, Postgres
Testing	Test strategy, pytest (3,000+ tests on one system), Selenium, Katalon Studio, Jenkins, eval suites for LLM features, production log checks before a fix is called done

PRODUCTION SYSTEM

Smart Money Trading (SMT): explainable AI trading agent · Founder & sole engineer

Jan 2024 – Present

Patent pending: Indian provisional application No. 202631090789, filed myself in July 2026

Live: smt-weex-trading-bot.jannet-ekka.workers.dev · *Public layer:* github.com/JannetEkka/smt-apac · WEEX feature

- Runs 24/7 and places real orders on WEEX's exchange-granted simulated account (about $10K). Built alone by specifying the work and directing AI coding agents: **91,000 lines of Python, 3,000+ tests, 344 merged pull requests**, each reviewed by me before merge.
- When the GCP billing account closed, I **moved the live system to a zero-cost stack in two days**: an Oracle Cloud free-tier VM under systemd, Cloudflare Workers and Google AI Studio's free tier. It re-adopted its three open positions from committed state.
- Audited 98 AI-written merges line by line and found two failures the green test suite missed: an order-format bug that had **rejected 1,137 live orders over three months**, and a memory freeze that kept the daemon down 60% of the time for ten days. A fix now counts as done only when the production log shows it.
- Any substituted default logs a warning and a liveness flag. That rule has caught four multi-week data bugs that would otherwise have run silently.
- Graded my own six AI agents on independent market data and found all six called direction at a coin flip. Rebuilt on that result: written rules open every trade, and the agents became advisors graded on every call. Every explanation passes a counterfactual test before a user sees it.
- Built **SMT World**, the product for users: a Three.js/WebGL world on Cloudflare Workers where people watch the agent trade and ask it why, answered by Gemini from the live book.

Stack: Python, pandas, Optuna, scikit-learn, CatBoost, Gemini, Oracle Cloud, Cloudflare Workers, BigQuery, systemd, pytest, GitHub Actions, Three.js

SELECTED BUILDS

Lore: a company brain for open-source projects · Graph Hacks, FalkorDB × WeMakeDevs

Oct 2026 · 4 days

Live: lore-gh5y.onrender.com · *Code:* github.com/JannetEkka/lore · Demo video · Blog post

- Demoed on the sponsor's own data: FalkorDB's GitHub org, 1,357 pull requests read into a FalkorDB graph of who wrote and reviewed what. A Gemini agent answers "who knows this part of the code?" through 12 Cypher tools and cites the PRs behind every answer.
- An *Under the hood* panel shows each tool call and Cypher query as it runs, so a user can check the answer. Triage drafts a reply to a new issue and suggests a reviewer without posting anything.
- Backtested on 300 real PRs: a real reviewer in the top three **90%** of the time, against 88% for the obvious baseline. GitHub sign-in, per-user memory graphs, an MCP server; live on Render and FalkorDB Cloud free tiers.

Klarbrief: official Swiss letters explained offline · Hack Apertus, Track 2B

Oct 2026

Code: github.com/JannetEkka/klarbrief

- Apertus 1.5 8B, Switzerland's open LLM, explains an official letter in the reader's language. It runs fully offline in llama.cpp on an internal Docker network on a 4-core CPU, so a letter never leaves the machine. `make onprem` brings the whole stack up.
- Every point is checked against the letter before it is shown: its quoted words must be found and its date or CHF amount must match. On 48 explanations, **0 wrong CHF amounts** reached the reader and the check stopped 6 of the model's 7 wrong dates. 34 tests, 5-page report.

SMT World: Clock In · Solana Mobile hackathon

Oct 2026 · 6 days

Code: github.com/JannetEkka/smt-solana-hack

- A native Android app in Kotlin and Jetpack Compose on the Solana Mobile Stack. Users call the market once a day against my trading agent; both calls land on Solana devnet in one memo signed through Mobile Wallet Adapter and are graded on real prices four hours later.
- Tested on a real phone across four releases, which found and fixed two bugs: a wallet refusing a saved login and a missing "graded" notification. Shipped with a leaderboard, home-screen widget, deck and captioned demo video.

SMT Receipts · Monad Metropolis, Onchain Finance & Trading track

Oct 2026

Live: jannetekka.github.io/monad-hack · *Code:* github.com/JannetEkka/monad-hack

- The trading agent's calls and the positions it actually holds are sealed on Monad testnet by a verified, ownerless contract, then graded against RedStone-signed prices net of fees. A keeper runs it unattended, indexed with Envio. 18 contract tests.

Wiretrap: adversarial security testing for AI agents · Gen AI Academy APAC, Cohort 3

2026

Live: wiretrap.onrender.com · *Code:* github.com/JannetEkka/wiretrap

- Point it at an agent and it clones every declared tool as a dead copy that records the call, then runs attacks and judges the tool-call log. It caught a Google codelab agent refusing a task in words after it had already run `ls -la` through its shell tool. Moved to free tiers (Render, Firebase, AI Studio) after GCP billing closed.

SmartDesk: multi-agent assistant with evaluated RAG · Gen AI Academy APAC hackathon, top 101 of 1,500+ *2026*
github.com/JannetEkka/smartdesk

- An ADK orchestrator routing to inbox, calendar and knowledge-base agents on Cloud Run, with Gmail and Calendar reached through **MCP servers I wrote**. The retrieval eval stopped a reranker that would have taken search from 29 ms to 2,382 ms for a gain inside the noise; the container went from 1.8 GB to 340 MB.

PROFESSIONAL EXPERIENCE

JTech Solutions (pre-incorporation) · Founder & AI Engineer *Jan 2024 – Present · Kolkata*

- Building SMT and SMT World (above) as the company's first product, while a full-time family carer and alongside the PGP in AI/ML.

Deloitte Consulting LLP · Test Automation Engineer (Analyst) *Aug 2019 – Jan 2023 · Bangalore*

- **Client-facing throughout:** ran demos, working sessions and requirement calls with client teams in US, UK and India hours for Fortune 500 accounts including AT&T Consumer Connect, Hewlett Packard Enterprise and The Dental Supply Company, and covered weekend on-call.
- **Led a 6-member QA engineering team** on automated testing for those clients.
- Built Selenium and Katalon Studio automation that **improved test execution efficiency by 83%**; Jenkins-based reporting cut manual analysis time by **75%**.
- Wrote Python analysis and Tableau dashboards tracking quality across **343 business components**, cutting test failures by 25%; analysed **50,000+ SAP Hybris transactions** to isolate performance bottlenecks for the client.
- Joined as a QA automation intern in Jan 2019 (North Dakota Health and Human Services website, POEDI XML testing); converted to analyst after six months. 2 Spot Awards and an Applause Award.

Tech: Selenium, Katalon Studio, Python, JavaScript, Jenkins, Salesforce, SAP Hybris, Tableau, JIRA, Git

AutoKorrekt · Lead Frontend Developer (EdTech startup MVP) *May 2024 – Jan 2025*

- Led the frontend of an AI answer-evaluation platform for teachers: PDF processing with coordinate-based extraction over **AWS Textract**, a bilingual English/German feedback interface on Amazon Comprehend, and the ML data flow across S3, RDS and SageMaker; scaled to **1,000+ concurrent submissions**.

EDUCATION

Post Graduate Program in AI & Machine Learning · UT Austin McCombs & Great Lakes *Mar 2025*
Rank 1 in batch · GPA 4.09/5

Bachelor of Technology, Information Technology · KIIT University, Bhubaneswar *2015 – 2019*
CGPA 7.17/10

ACHIEVEMENTS & CERTIFICATIONS

- **Provisional patent filed**, India, App. No. 202631090789 (Jul 2026), covering the SMT decision and verification architecture.
- **WEEX AI Wars I: #1 on the preliminary leaderboard** of 230+ teams, then one of 37 finalists in the live AI trading competition; featured in WEEX's coverage and two live AMAs.
- **Winner, Best DeFi Application**, OpenServ × Hack2skill hackathon (Smart Money Tracker, multi-agent whale tracking on three chains); runner-up, Best Website Application.
- **Top 101 of 1,500+ teams**, Google Cloud Gen AI Academy APAC 2026 Cohort 1 hackathon (SmartDesk).
- **Google Cloud Gen AI Academy** 2025 (ID 2025H2S04GENAI-A01917) and APAC 2026 Cohorts 1, 2 and 3; Gen AI Exchange Hackathon 2025; Agentic AI Day; Asha AI Hackathon 2025.
- **CPSAT**, Certified Professional Selenium Automation Testing, 2022. All credentials on Credly and Google Skills.
